

MOECK WARMING SYSTEM®

THE GREEN THERMAL BLANKET RANGE FOR EFFICIENT TEMPERATURE CONTROL

The MOECK WARMING SYSTEM® offers active patient warming for paediatric and adult patients through convective temperature control. The special design of the warming blankets ensures the drainage of accumulating fluids, pressure relief in the patient position and effective heat distribution over the entire length. Various blanket models and a warm air unit with two hoses offer maximum application flexibility while avoiding voluminous hazardous waste thanks to the reusable system.
